Summary

Computer science student with game industry analytics experience spanning player progression, game balance, and sales behavior. Builds development tools, simulations, and dashboards to inform game decisions; brings hands-on game development and experience collaborating with teams and a client.

Education

Whitman College Walla Walla, WA
B.A. in Computer Science; Minor in Data Science Expected May 2027
Major GPA: 3.8
Relevant coursework: Game Design, Data Science, Data Structures, Algorithms, Linear Algebra, Statistics

Experience

Data Analyst — One More Game Jan 2026 – May 2026
Seattle, WA

- Analyzed player metrics with DuckDB (SQL) and Python/pandas to identify progression bottlenecks limiting early player retention.
- Built a Unity-integrated exporter for real-time game data, including weapon statistics and enemy health and damage, producing structured datasets for balance analysis.
- Designed a team dashboard and weapon simulation model to support data-driven game balance decisions; collaborated across functions to set data-backed player progression targets.

Data Analyst — Ironwood Games Jun 2025 – Aug 2025
Redmond, WA

- Analyzed sales behavior and the effects of sales promotions and events to inform decisions aimed at improving profitability.
- Cleaned, transformed, and visualized large datasets with Python, pandas, and Matplotlib; communicated findings through a presentation and final report.

Admissions Data Analyst — Whitman College Admissions Office Sep 2024 – May 2025
Walla Walla, WA

- Cleaned and analyzed admissions datasets to identify trends in applicant demographics, acceptance rates, and enrollment.
- Created visualizations and reports highlighting financial inefficiencies and recommending strategies for the following admissions year.

Game Development & Design Projects

Particle Simulation Sandbox | Python, Pygame
Developed a sandbox physics engine simulating interactions among solids, fluids, and gases, inspired by *Noita*. Designed modular particle behaviors supporting interactions involving acid, oil, and slime.

Minecraft Mod | Kotlin, Fabric
Built a Hypixel SkyBlock mod with real-time profit tracking and a custom UI. Implemented chat and packet parsing, Mixin-based interception, and a configuration system; used Claude Code to accelerate iteration and debug against live gameplay data.

Harmony | Team Game Design Project
Collaborated in a small team with Walla Walla Guitar Company as the client for a Game Design course project. Applied Agile and Waterfall development methods throughout the design process.

Skills

Languages: Python, SQL, Kotlin, Java, C++, R, JavaScript
Libraries & tools: Pandas, NumPy, Matplotlib, Plotly, Pygame, DuckDB, Git, Jupyter, VS Code, Figma, Claude Code
Relevant skills: Game balance analysis, player progression analytics, data visualization, simulation, algorithm design, Agile and Waterfall methods
